

CLAIM

2. A fishing bobber device comprising: two half spheres of a buoyant medium, biased together under force by a stretched elastic cord, or a loaded spring, or tension from spring steel, which are lockable in place over a fishing line by a lever mechanism consisting of two thin hard plastic pieces attached to adjacent surfaces of the half spheres and extending outwardly therefrom said sphere at a 45 degree angle to the flat surface that when pushed together separate the half spheres apart for insertion of fishing line.
